

To whom it may concern

I am a Master in Business Analytics with concentration in Machine Learning track at Santa Clara University now. I am a consistent and persistent person with extensive academic background and professional experience in Business, Applied Statistics and Data Science Analytics. My previous work experience has taught me how to leverage data to solve real business problems, driving the successful execution of entire business operations. I am also a fast learner with great intuition and an excellent problem solver with strong quantitative and modeling skills. Years of professional training have shaped me to work well under high-pressure and time-constraints.

As a hybrid in various data science and quantitative modeling fields including: Hypothesis Testing & Causal Inference; Predictive Modeling & Machine Learning; and Time-Series Forecasting, I pursue a career toward a combination between data scientist and AI/ML engineer, preferably a career with intriguing challenges. I am motivated to apply various /Quantitative Finance/ Bio-statistics / Data science/ Machine learning techniques to solve Finance, Healthcare or High-Tech related problems. I have attached my resume for your review and would be grateful for the opportunity to further discuss my qualifications in an interview.

Best Regards

Amy Zhou
